T.61.5140 Machine Learning: Advanced Probablistic Methods

Hollmén, Raiko (Spring 2008)
Problem session, 1st of February, 2008
http://www.cis.hut.fi/Opinnot/T-61.5140/

1. Construct a causal network and follow the reasoning in the following story. Mr. Holmes is working in his office when he receives a phone call $(C)$ from his neighbor, who tells him that Holmes' burglar alarm $(A)$ has gone off. Convinced that a burglar has broken into his house ( $B$ ), Holmes rushes to his car and heads for home. On his way, he listens to the radio, and in the news it is reported $(R)$ that there has been a small earthquake $(E)$ in the area. Knowing that earthquakes have a tendency to turn on burglar alarms, he returns to work.

Draw a causal network and write the joint probability for the random variables C,A,B,R,E. (pages 360-)
2. Consider the network in Figure 1. What is the Markov blanket of each variable? (pages 382-383)

Figure 1: Problems 2 and 3.
3. From the network in Figure 1, do the following conditional independencies follow? (D-separation, page 378)
(a) $A \perp B \mid C$
(b) $A \perp B \mid \varnothing$
(c) $C \perp E \mid B, D$
(d) $C \perp D \mid A, B$
(e) $B \perp F \mid A, C$
(f) $A \perp E \mid D, F$
4. Consider the Bayesian network defined by the following tables. Write a program that generates random realisations (samples) of the variables $A, B, C, D$. Based on 1000 samples, estimate $P(B=1 \mid D=1)$.

| $\mathrm{P}(\mathrm{A})$ |  |
| :--- | :--- |
| $\mathrm{A}=0$ | 0.5 |
| $\mathrm{~A}=1$ | 0.5 |
| $\mathrm{P}(\mathrm{B})$ |  |
| $\mathrm{B}=0$ | 0.8 |
| $\mathrm{~B}=1$ | 0.2 |

| $P(C \mid A, B)$ | $\mathrm{A}=0, \mathrm{~B}=0$ | $\mathrm{~A}=0, \mathrm{~B}=1$ | $\mathrm{~A}=1, \mathrm{~B}=0$ | $\mathrm{~A}=1, \mathrm{~B}=1$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{C}=0$ | 0.8 | 0.7 | 0.6 | 0.3 |  |
| $\mathrm{C}=1$ | 0.2 | 0.3 | 0.4 | 0.7 |  |
| $P(D \mid C)$ | $\mathrm{C}=0$ | $\mathrm{C}=1$ |  |  |  |
| $\mathrm{D}=0$ | 0.9 | 0.2 |  |  |  |
| $\mathrm{D}=1$ | 0.1 | 0.8 |  |  |  |
